ASX release

Worley to deliver FEED for Dow's Path2Zero Cogen project in Canada

Worley Limited (ASX: WOR) ("Worley") has been selected by Dow to provide Front End Engineering Design (FEED) under a new Engineering, Procurement, and Construction Management (EPCM) services contract for the cogeneration component of their Fort Saskatchewan Path2Zero Project in Alberta, Canada.

Dow's Path2Zero expansion project will create the world's first net zero emissions integrated ethylene cracker and derivatives site with respect to scope 1 and 2 emissions.

Worley's scope includes a brownfield installation of a cogeneration facility with integrated post-combustion carbon capture. Work will be delivered by Worley's Canada and India-based Global Integrated Delivery team, with the facility expected to be operational by late 2030.

Chris Ashton, Chief Executive Officer of Worley, said: "The award reflects Worley's strategic focus on expanding our full project delivery solutions for our customers globally.

"Dow's Path2Zero project is redefining what's possible for industrial decarbonization. By bringing together our project delivery expertise with Dow's vision, we're enabling one of the world's first fully integrated cogeneration and carbon capture facilities, demonstrating how collaboration can accelerate the shift to net zero operations at scale," he said.

Authorized for release by Nuala O'Leary, Group Company Secretary.
